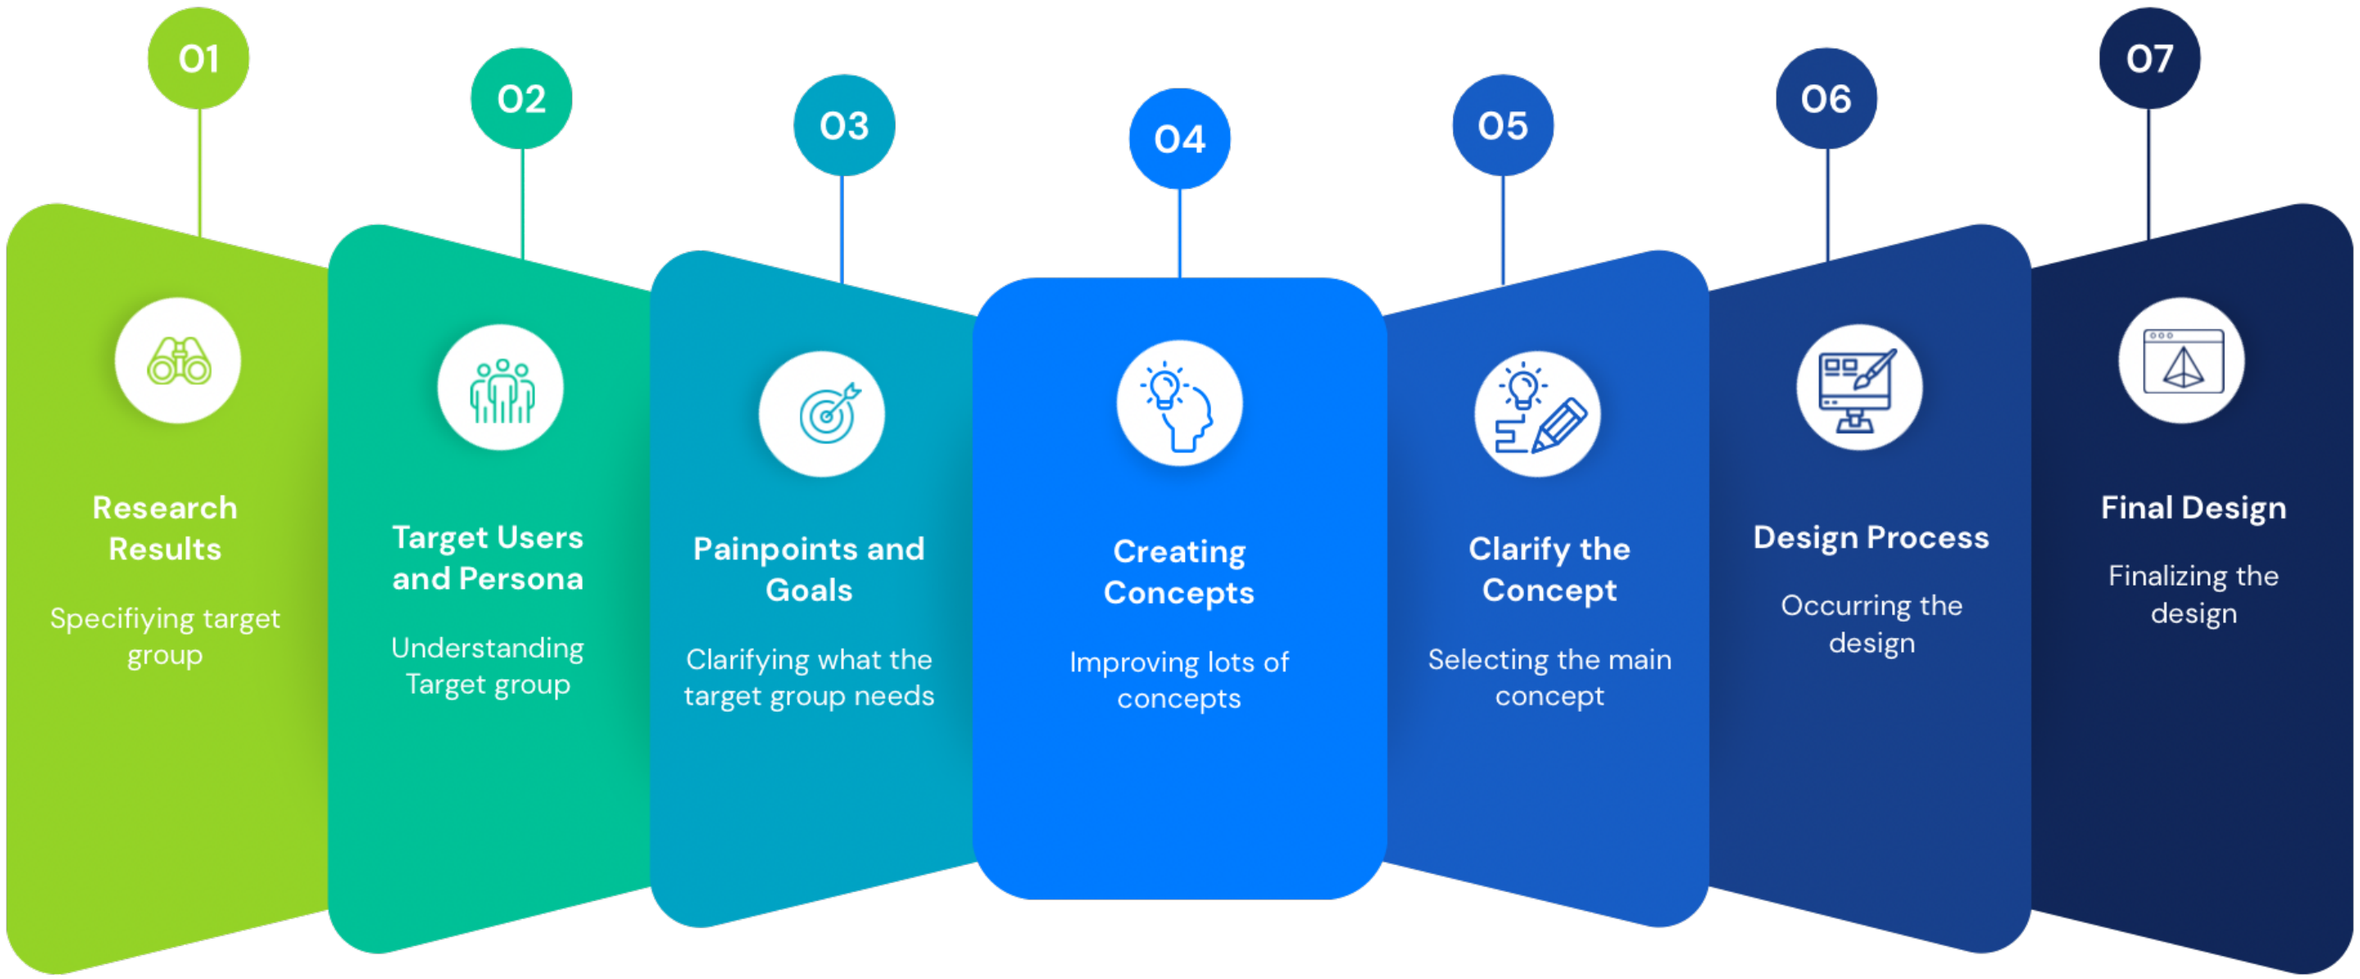
IDE201 MILESTONES - Demir Yapar

Capsule Coffee Machine for Offices



IDE201 MILESTONES - Demir Yapar

01

Research Results

- According to my research, my own experience and my interviews; users struggle with maintaining performance and noise
- When users buy a capsule coffee machine for second time, they consider if the machine is cleaned easily

02

Target Users and Persona

- My target audience is office workers so machines are used so much and they get dirty fast
- My persona has own machine and use a machine at his office so it shows the differences and helps me to choose my focus

03

Painpoints and Goals

- Hygien is important to maintain machine's performance
- Cleaining machine is so close, there is no feedback
- Machine must be simple to be used in its purpose

04

Creating Concepts

- I tried 12 concepts totally, all of them are connected to my target audience slightly or directly; however, some of them related with painpoints
- Painpoints related concepts are closer to me

05

Clarifying the Concept

- Some specific objects helped me to specify my concep such as rock=stability of performance, space= quiet working

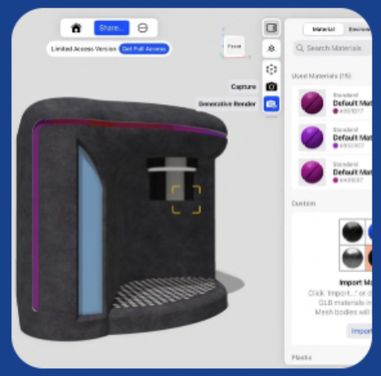
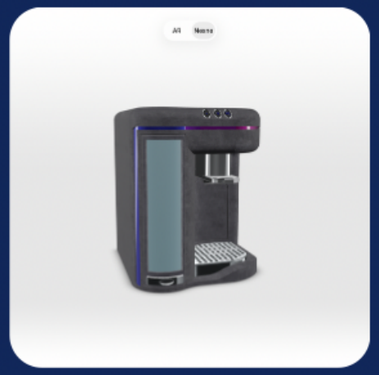
06

Design Process

- I tried some different form for the machine with ai. For the concept, machine’s shape should be organic. For the target audience’s environment, machine’s shape should be geometric. While I was modeling it. I decided to impose the concept to my machine via adding texture.



07

Final Design


- I tried some different form for the machine with ai. For the concept, machine’s shape should be organic. For the target audience’s environment, machine’s shape should be geometric. While I was modeling it. I decided to impose the concept to my machine via adding texture.
