Hot Beverage Preparing Electronic Device

IDE202.A_Duru_Ege

RESEARCH PHASE

Understanding the Ritual of Hot Beverage Preparation

-Project research focused on how modern hot beverage devices prioritize speed and automation, often reducing the user’s involvement in the preparation process. The goal became understanding how design could restore awareness and participation in daily rituals..

KEY INSIGHT

-Modern devices increase efficiency but reduce awareness, ritual and personal control during beverage preparation.

PROBLEM DEFINITION

Automation compresses the tea preparation process and weakens ritual awareness.

USER DEFINITION

Home-working individuals who are constantly exposed to technology but seek calmer and more meaningful morning routines.

OPPORTUNITY AREAS

Slow interaction instead of instant automation

Visible brewing process

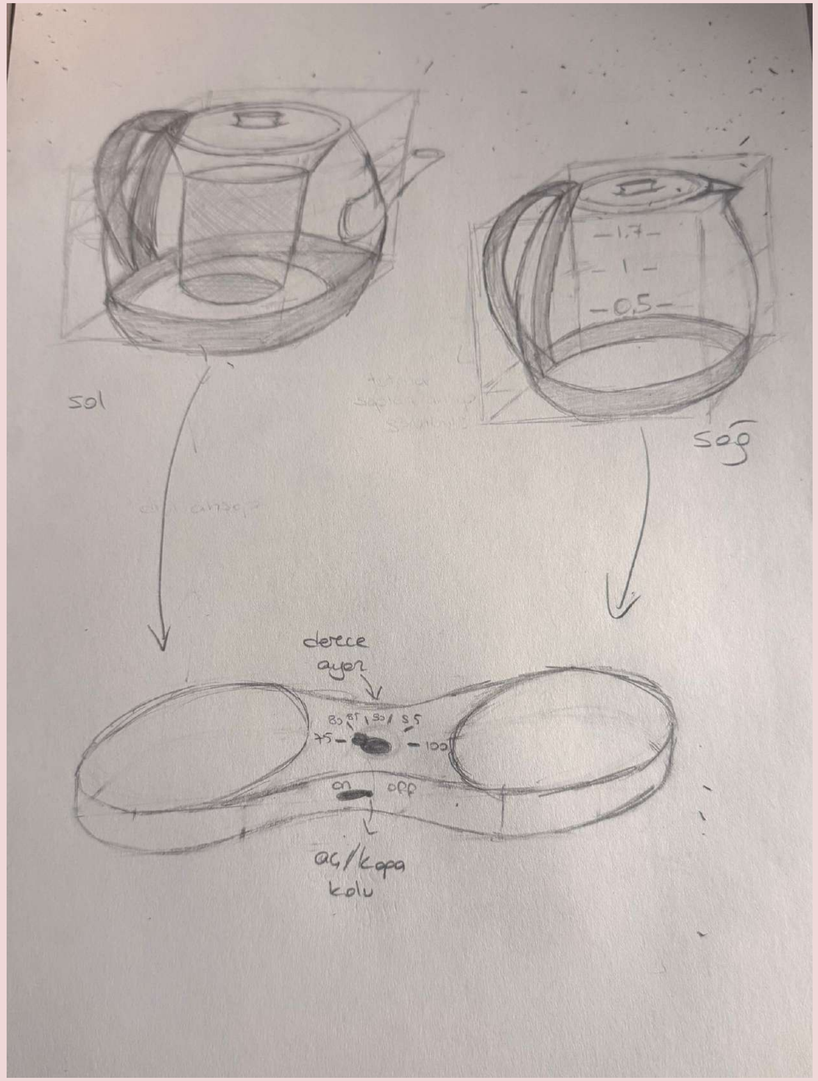
Mechanical interaction rather than digital interfaces

Modular systems that require user participation

Sustainable and transparent materials

SELECTED CONCEPT

The system separates brewing and heating into two intentional actions, encouraging a slower and more conscious preparation process..



AI-ASSISTED DESIGN PROCESS

Evaluating strengths and weaknesses of design concepts

Structuring research findings

Generating visual renderings from sketches

Revising prototypes based on feedback.

MATERIAL & SUSTAINIBILTY STRATEGY

Design Intent: Sustainable & Transparent Ritual

Main Body (Transparent Module)

-Recycled Borosilicate Glass
-Heat resistant
-100% recyclable
-Allows visible brewing process

Handles (Wood Appearance)

-FSC-certified bamboo
-Or bio-based composite with wood fiber
-Low thermal conductivity
-Replaceable component

Base (Cream-Colored Heating Unit)

-Recycled ABS with mineral filler
-Or recycled aluminum with powder-coated finish
-Designed for easy disassembly

FINAL DIRECTION SENTENCE

I will design for individuals who value conscious tea preparation rituals
by focusing on separating brewing and heating into two intentional actions
because automation compresses the process and reduces ritual awareness.
