KEY WORDS

Prosumer coffee experience

Manual control

Italian coffee ritual

Dide Sedef Aydın | S040751

SELECTED IMPACTFUL PROMPTS

To make coffee that is as close as possible to what people drink in Italy, what should be my technical priority in the design of this machine?

Can you list and explain the materials I should use in this machine to create an Italian touch?

What are the correct brewing methods for a Moka pot?

Dide Sedef Aydın | S040751

AI ROLE TAGS

- Prompt for visual exploration → **Expander**
- Asking about prosumer machines → **Clarifier**
- Exploring the ritual aspect of coffee preparation → **Re-framer**
- Asking whether integrating grinding and brewing in the same machine is practical for users → **Critique**

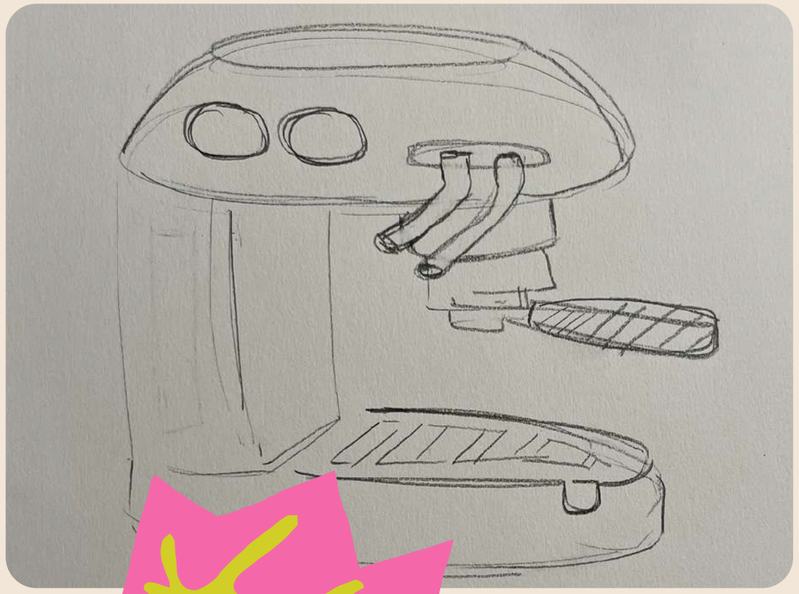
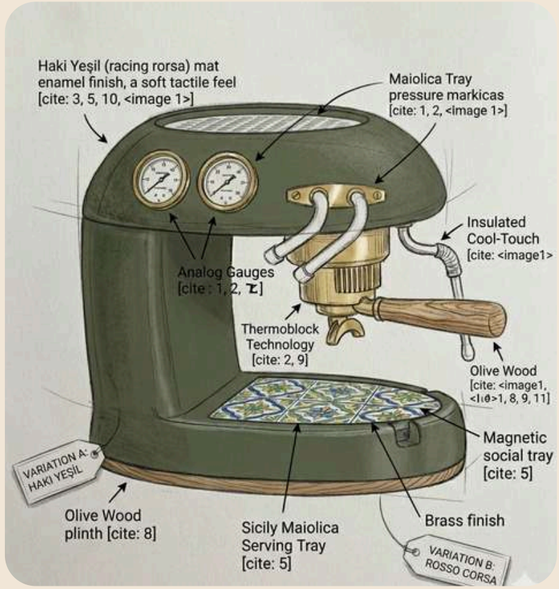
AI RESPONSE SUMMARIES

The AI suggested focusing on pressure profiling and combining analog and digital elements to create a prosumer-level experience.





Dide Sedef Aydın | S040751

REFLECTIONS

AI helped me explore different visual directions and allowed me to quickly test different design ideas during the development of my project. It also helped me rethink the relationship between manual control and digital precision, which became an important aspect of my design concept. In addition, I used AI to learn more about how coffee is traditionally preferred and consumed in Italian culture, which helped me better understand the ritual and experiential aspects of coffee preparation. AI also provided examples of machines that are commonly preferred by prosumer users, which helped me position my design within that context and refine my design decisions.

Dide Sedef Aydın | S040752

DESIGN DECISIONS

The main design decision of this project was to integrate manual grinding and brewing into the same machine. The concept focuses on creating a ritualistic experience for prosumer users, allowing them to actively participate in the coffee-making process. For this reason, manual control was kept as the core interaction of the design, enabling users to adjust and engage with the preparation process while maintaining a sense of craftsmanship and control.

Dide Sedef Aydın | S040751

ACCEPTED

- Prosumer control idea
- Pressure adjustment concept

REJECTED

- Fully automatic systems
- Separate grinder and machine

TRANSFORMED

Instead of two separate devices, I transformed the idea into a single machine that combines manual grinding and brewing. While doing this, I also aimed to preserve the traditional rituals involved in preparing Italian coffee, ensuring that the experience of making coffee remains an important part of the process.
