IDE202 YAĞMUR GÜR

AI-Supported Design Process Summary

Initial Design Direction

Keywords ;

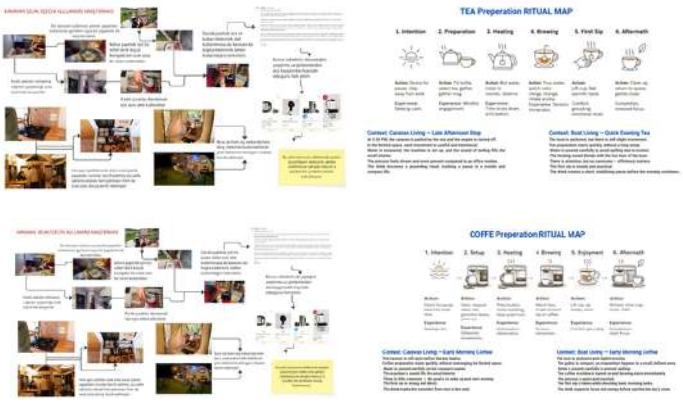
- Turkish tea ritual
- Turkish coffee preparation
- Compact beverage system

AI Roles;

- Clarifier
- Re-framer

Impactfull Prompt;

Hey Chat, birlikte bir proje üzerinde çalışacağız. Sana konuyu anlatacağım. İki rolün olacak: Clarifier ve Re-framer. Anlamadığın bir şey olursa sor. Amacımız fikri geliştirmek ve araştırma yapmak. Bugün user considerations, context of use, early assumptions ve references



User Survey & Initial Research: I conducted a user survey to understand people's hot beverage consumption habits. This study helped identify which drinks users consume, where they prepare them, and how frequently they drink them. The results showed that tea and coffee are the most frequently consumed beverages.

Context Research (Boat & Caravan Living): During the research, I realized that most existing designs focus on home kitchens. Therefore, I shifted the research towards boat and caravan living environments. In these contexts, limited kitchen space and the need to use multiple appliances create both spatial and safety challenges, which revealed an important design opportunity.

Ritual Analysis of Tea & Coffee: Since Turkish tea and Turkish coffee were identified as the most commonly consumed beverages, I created ritual maps to better understand their preparation processes. These analyses showed that the design should not only be functional but also support the ritualistic and experiential aspects of beverage preparation.

Design Direction

Keywords ;

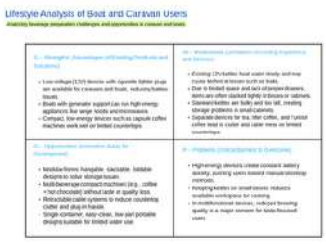
- Space limitation
- Energy consumption
- Preservation of ritual

AI Roles;

- Clarifier
- Re-framer

Impactfull Prompt;

Şimdi sana bir araştırma ve görüşme notlarımı ileteceğim buradan kullanıcı profiline özel
Evidence type: Interview
• Fact: “I wipe the kettle handle before touching it.”
• Why it matters: Hygiene uncertainty shapes the ritual.
• Quote: “Is this clean?”
Bu format gibi bir swopt analizinde bulunmanı istiyorum, bu yaşam tarzında içecek üretiminde eksik veya giderilmesi gereken yönleri analiz edecek şekilde bir analizde bulunmanı istiyorum. Böyle güçlü yönler var gibi tek tek cümlelerle bana anlat



User Interviews & Marine Context Decision: After the initial survey, I prepared more focused questions and conducted interviews with users. During these conversations, I analyzed users’ hot beverage preparation habits, the environments where they prepare drinks, the challenges they face, and their experiences with appliances. Recurring issues such as limited space, appliance clutter, and safety concerns led me to shift the design context toward marine living environments.

User Persona Cards: I created user persona cards to organize the insights gathered from the interviews. These cards helped me better analyze users’ behaviors, needs, expectations, and usage scenarios.

Identifying Design Needs: By analyzing the persona cards, I identified the key requirements the design should address. In this stage, I focused on space efficiency, multifunctionality, safety in use, and preserving beverage preparation rituals.

SWOPT Analysis & Further Research: To clarify the design direction, I conducted a SWOPT analysis. In this analysis, I evaluated existing beverage machines, kitchen constraints in marine environments, user needs, and potential design opportunities. Based on the results, I decided to continue the research in a more detailed and focused way.

Design Development

Keywords ;

- Turkish tea ritual
- Turkish coffee preparation
- Marine living
- Compact beverage device
- Space-efficient kitchen
- Multi-beverage system

AI Roles;

- Clarifier
- Re-framer
- Expander
- Critique

Impactfull Prompt;

PROMPT 1

- "Sıcak içecek tüketimi üzerine yapılan kullanıcı anketinin sonuçlarını analiz et. Kullanıcıların en çok hangi içecekleri tükettiğini, bu içecekleri nerede hazırladıklarını, ne sıklıkla tükettiklerini ve hazırlama sürecinde hangi sorunlarla karşılaştıklarını belirle. Bu verilerden tasarım fırsatları çıkar."

PROMPT 2

- "Tekne ve yat gibi marine yaşam ortamlarında sıcak içecek hazırlamanın zorluklarını değerlendir. Sınırlı mutfak alanı, güvenlik, enerji kullanımı ve cihaz düzeni gibi faktörleri analiz ederek bu ortamlara uygun ürün tasarım fırsatları öner."

PROMPT 3

- "Türk çayı ve Türk kahvesi hazırlayabilen, tat ve koku kaybı yaşatmayan, marine mutfakları için tasarlanmış kompakt ve çok işlevli bir içecek cihazı için ürün görselleştirme fikirleri üret."

Concept Development

Based on the research findings, the project aims to design a compact beverage device for middle–upper income yacht and boat owners living a marine lifestyle. Despite having advanced equipment, these users still face space and organization problems in small marine kitchens.

The concept focuses on solving space limitations and cable clutter while supporting the ritual culture of Turkish tea and Turkish coffee. The goal is to create a multi-beverage system that preserves the taste and aroma of traditional drinks.

Concept goals:

- Eliminating space limitations
- Solving cable organization problems
- Creating a multi-beverage device
- Preserving taste and aroma
- Supporting Turkish tea and coffee rituals

Ideation and Prototyping Process

I explored different concepts and product configurations through sketches and early design ideas. This stage focused on integrating tea and coffee preparation systems into a single compact device.

The ideation process included:

- exploring form alternatives
- testing multi-functional beverage systems
- making two beverages at the same time
- evaluating space-efficient layouts

These explorations helped refine the design direction and identify the most feasible concept.

AI Supported Visualization

AI helped with:

- generating concept visuals
- refining product form and proportions
- exploring different perspectives

These visualizations helped communicate and evaluate the concept during development.

during the development process.

Design Development

AI Response Summaries

AI helped analyze user survey and interview insights, suggested marine context opportunities, and supported concept visualization and idea generation during the design process.

Your Design Decisions

- Focusing on marine living environments (boats/yachts)
- Designing a compact multi-beverage device
- Supporting Turkish tea and Turkish coffee rituals
- Solving space and appliance organization problems
- A machine that makes both Turkish coffee or tea, and does both at the same time with the push of a button.
- Shared water tank distribution.
- Cable collection mechanism.

What You Accepted, Rejected, and Transformed.

Accepted

- Marine lifestyle as the main context
- Combining tea and coffee preparation in one device

Rejected

- Designs focused only on home kitchens
- Using multiple separate appliances

Transformed

- Traditional tea and coffee rituals into a modern compact product system suited for marine kitchens.
