Hot Beverage Preparing Electronic Device

DESIGN MILESTONES

Deniz Demirtürk

01 Research

Understanding the hot beverage preparation experience

AI Role: Clarifier

AI Prompt
"Where should I start for designing a hot beverage device that improves the preparation experience?"

AI Response Summary
AI suggested defining a strategic design direction and focusing on the experiential dimension of preparation.

Reflection
This step helped frame the project as an experience design challenge rather than simply designing a new appliance.
Decision
Focus on an experience-driven hot beverage device.

02 Exploring Beverages

Exploring potential drink types

AI Role: Expander

AI Prompt
"Is there a traditional drink that creates a calming or altered state without alcohol?"

AI Response Summary
AI suggested kava, a traditional Pacific beverage known for relaxation effects.

Reflection
Kava initially seemed interesting because of its ritualistic preparation.
Decision
Rejected because it is not typically consumed as a hot beverage.

03 Defining the Concept

Selecting herbal tea blends as the focus

AI Role: Expander

AI Prompt
"Is there a traditional drink that creates a calming or altered state without alcohol?"
AI Response Summary
AI suggested kava, a traditional Pacific beverage known for relaxation effects.

Reflection
This shifted the project from a generic beverage machine to a personalized herbal blend system.
Decision
Design a mood-responsive herbal tea blending machine.
Rejected because it is not typically consumed as a hot beverage.

04 Herbal Tea Users

Preparing interview questions

AI Role: Expander

AI Prompt
"Generate interview questions for herbal tea users."
AI Response Summary
AI produced questions about preparation habits, motivations, mood, and tea preferences.

Reflection
AI helped generate many questions quickly but some were repetitive.
Decision
Selected the most relevant questions and simplified the interview structure

05 Research on Herbal Tea

Studying herbal tea benefits

AI Role: Clarifier

AI Prompt
""Find research on herbal teas and their effects on mood."
AI Response Summary
Different herbs influence mood differently:
Chamomile → calming
Peppermint → alertness
Lemon balm → stress reduction

Decision
Use functional herbal blends as the core concept.

06 Visualizing the Product

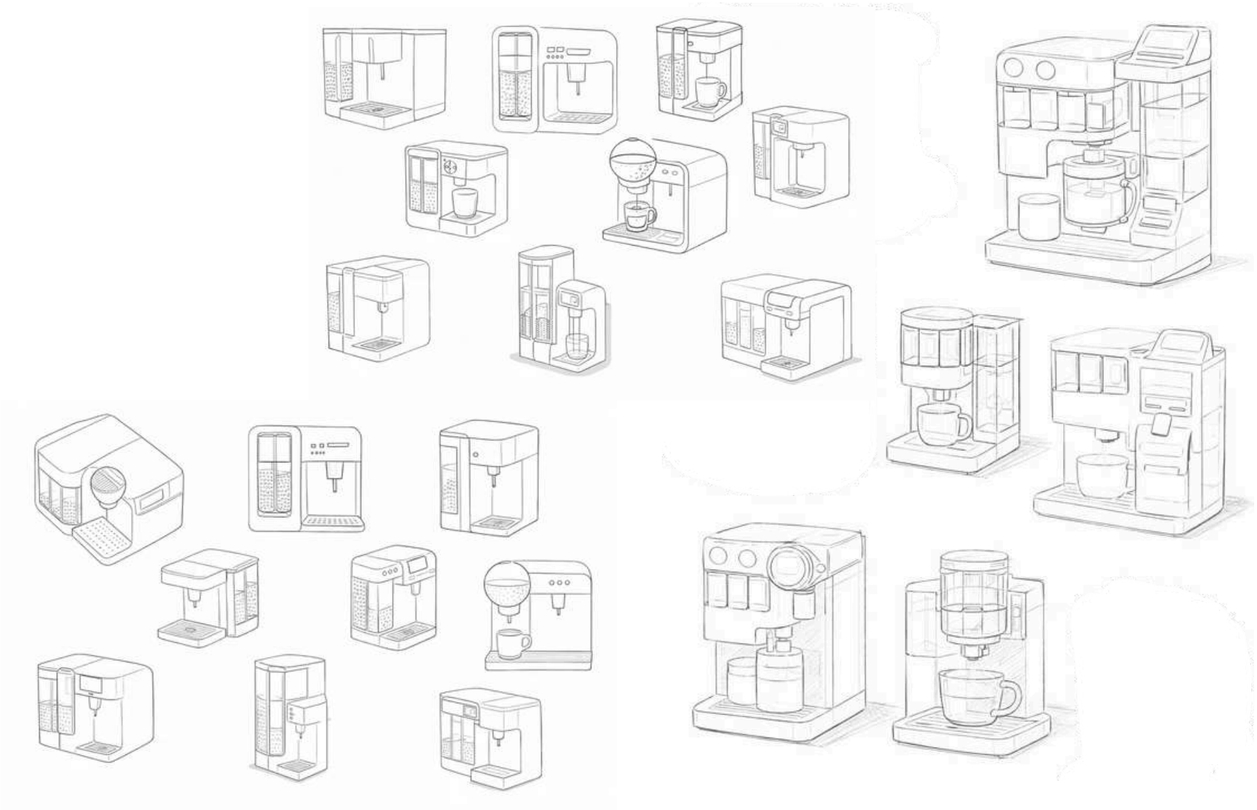
Generating concept visuals

AI Role: Expander

AI Prompt
"Generate a visualization prompt for a herbal tea blending machine with visible herbs."
AI Response Summary
AI helped produce a detailed prompt describing:
- transparent herb chambers
- mood-based interface
- dormitory environment
- warm yellow design language

Reflection
The generated prompt helped create clearer product visualizations.

Decision
Used the prompt to visualize it on another AI platform.

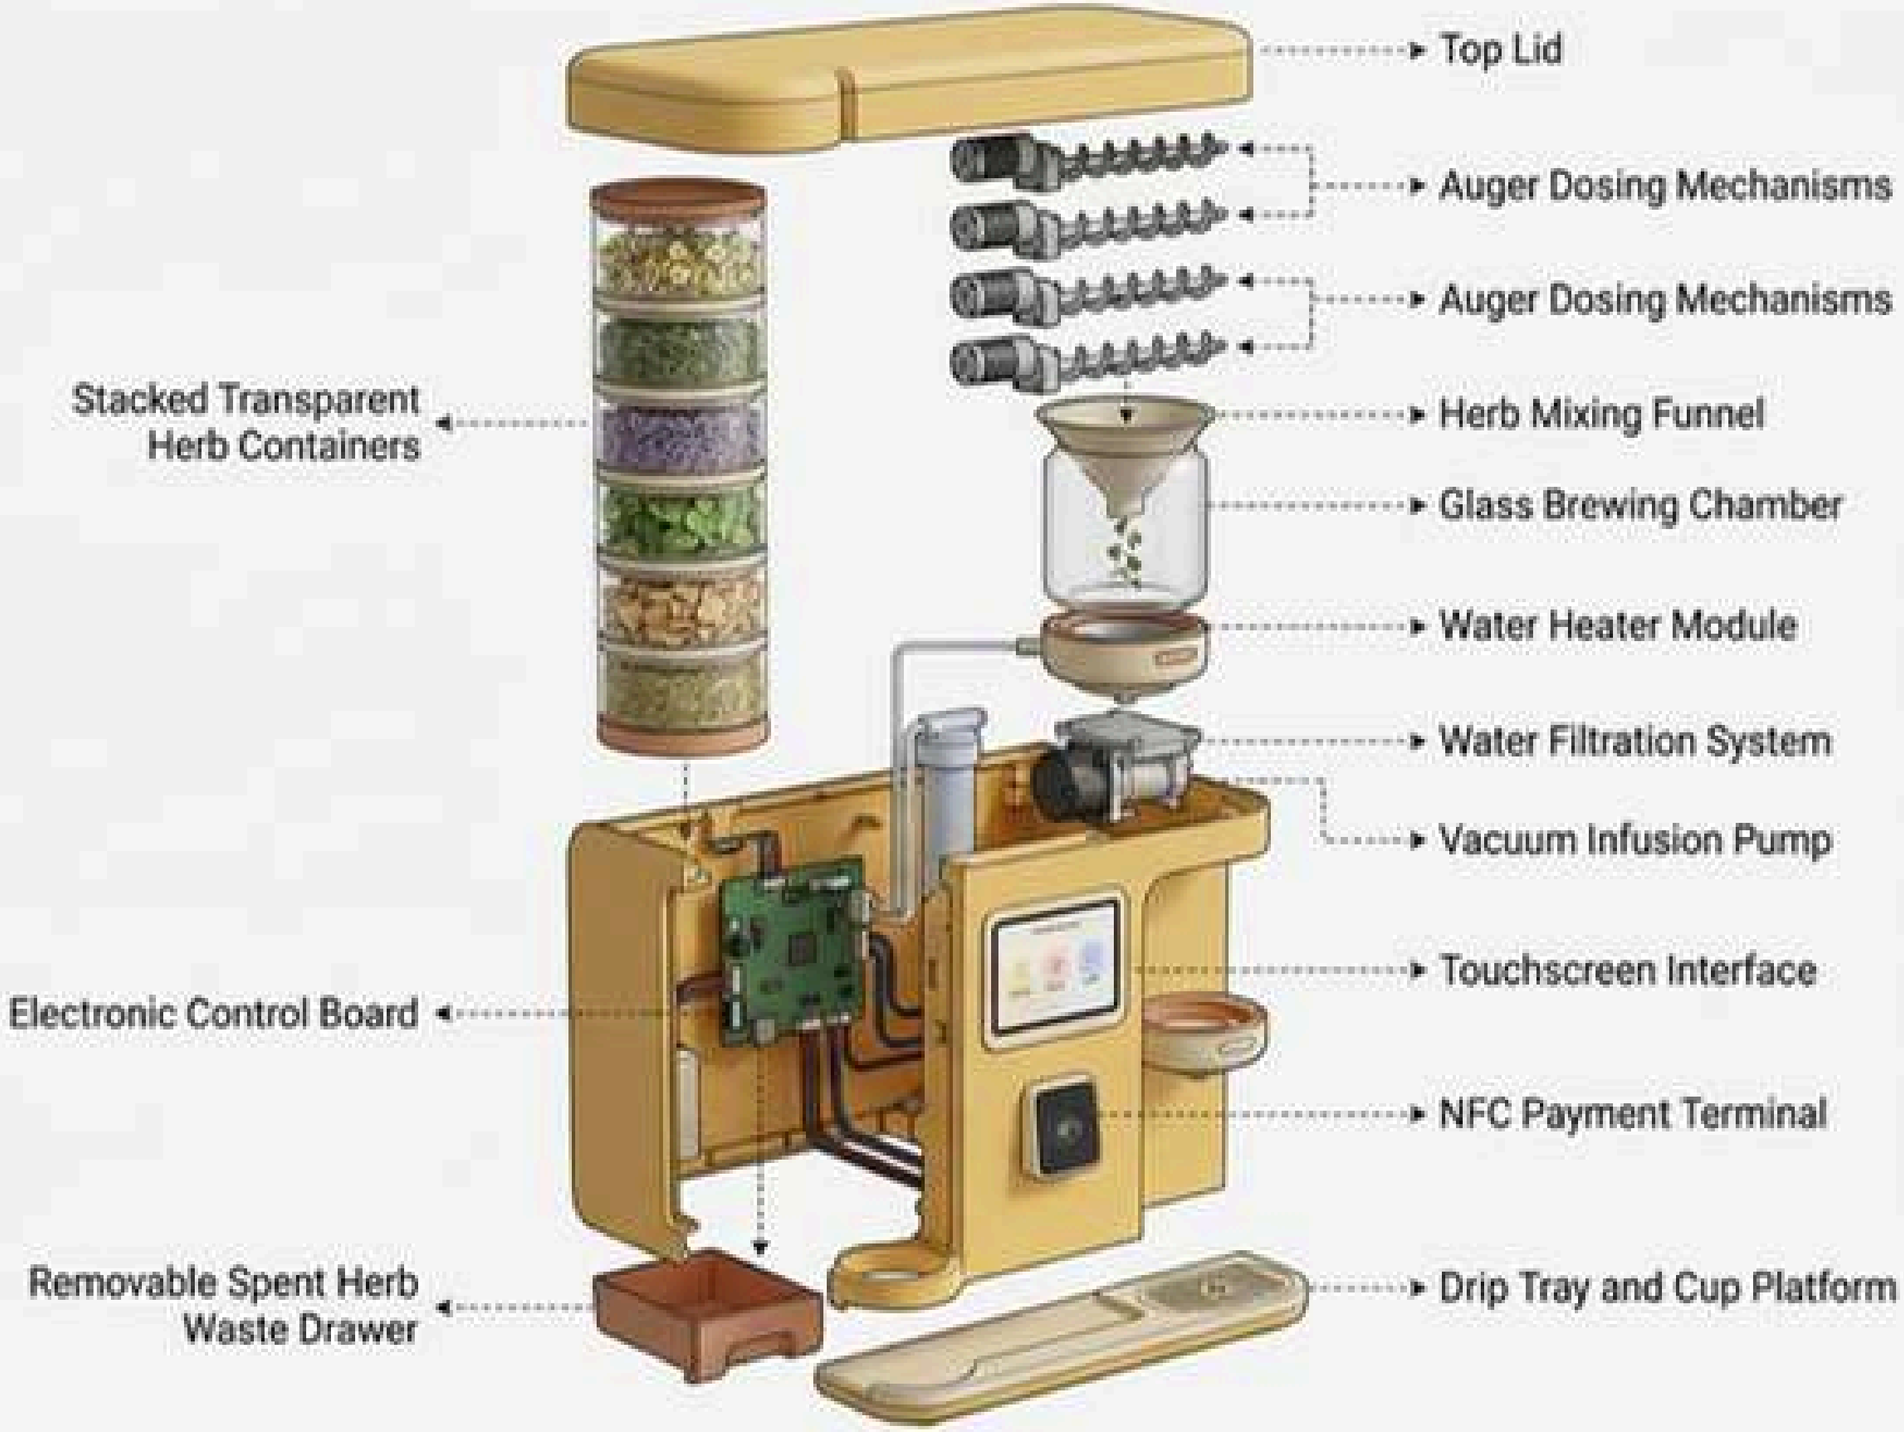


Water tank

- Not efficient enough
- Needs constant refill
- Not safe

Filtered tap water

- Doesn’t need refill
- Less maintanance
- With filter changes it’s safe



Top Lid
Auger Dosing Mechanisms
Auger Dosing Mechanisms
Stacked Transparent Herb Containers
Herb Mixing Funnel
Glass Brewing Chamber
Water Heater Module
Water Filtration System
Vacuum Infusion Pump
Touchscreen Interface
Electronic Control Board
NFC Payment Terminal
Removable Spent Herb Waste Drawer
Drip Tray and Cup Platform
