MARCH 2026

MARCH 2026

DESIGN MILESTONES

PREPARED BY:

AHMET TALHA FELEK

PROJECT IDENTITY & STRATEGY

RITUAL STATION: PORTABLE ALL-IN-ONE BREWING SYSTEM

KEYWORDS

Portable Ritual, Precision Brewing, User Agency, Haptic Interaction.

DESIGN DECISION

Transitioning from a passive thermos to an active, independent brewing station.

REFLECTIONS

Design is no longer just about form; it’s about managing the "logistics of a ritual." AI helped me bridge the gap between abstract user needs and technical feasibility.

MILESTONE 1 – PROBLEM DEFINITION

AI ROLE: [RE-FRAMER]

IMPACTFUL PROMPT

Create a Direction Sentence for a portable ritual system. Focus on the difficulty of preparation and dependency on external sources.

AI RESPONSE SUMMARY

The AI re-framed the problem from "keeping water hot" to "solving fragmented logistics," suggesting that the user should be a "maker" rather than just a "consumer."

ACCEPTED

The focus on "user independence" from cafes or kitchens.

TRANSFORMED

The project moved from a "smart bottle" to a "portable brewing station.

MILESTONE 2 – CONCEPT IDEATION

AI ROLE: [EXPANDER]

IMPACTFUL PROMPT

Develop three distinct alternatives: Capsule, Sensory Minimalist, and Precision Pro. Explain their differences in user interaction.

AI RESPONSE SUMMARY

AI proposed three levels of agency: Minimalist (sensory/vague), Capsule (practical/limited), and Precision (technical/empowering).

REJECTED

Sensory Minimalist. I rejected this because it lacked the "Precision Control" needed for professional-grade tea/coffee.

ACCEPTED

Precision Pro. I chose this for its high-tech feedback and granular control.

MILESTONE 3 – ERGONOMIC & TECHNICAL PIVOT

AI ROLE: [CRITIQUE]

IMPACTFUL PROMPT

Analyze the placement of the OLED screen on the main body. What are the ergonomic and manufacturing risks?

AI RESPONSE SUMMARY

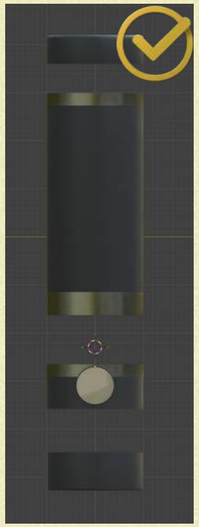
The AI critiqued the body-mounted screen, citing grip discomfort and the complexity of routing wires through vacuum-insulated double walls.

DESIGN DECISION

I relocated the OLED interface to the metallic band.

ACCEPTED

This simplified the wiring and preserved the "Ergonomic Purity" of the cylindrical body.



MILESTONE 4 – FEEDBACK

FINALE

AI ROLE: [CLARIFIER / EXPANDER]

IMPACTFUL PROMPT

My Hocam requested a tool for tea brewing. How can I integrate a French Press mechanism into this specific form factor?

AI RESPONSE SUMMARY

AI suggested a manual plunger system that utilizes the existing lid, merging digital temperature accuracy with tactile/mechanical pressing.

TRANSFORMED

A static tea filter was transformed into an Integrated Plunger System after Tugba Hoca's feedback.

DESIGN DECISION

Added a 6mm stainless steel rod and mesh filter to the lid assembly.
